- 8 Half size slot

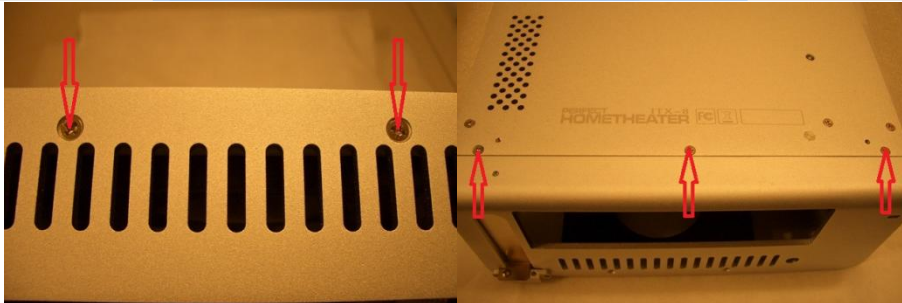

Removing top panel

Attention:

Our chassis are built with very small gaps between front, top and back, so please be careful when removing and reinstalling top panel. To avoid scratches, please loose two screws in the back and – if still doesn't go easy - three screws in the bottom. (Two of them are hidden under feet)

Now you can easy remove top panel.

**PERFECT
HOMETHEATER**

ODD/HDD bracket is hold in place by four screws. Please remove screws and remove ODD/HDD bracket.

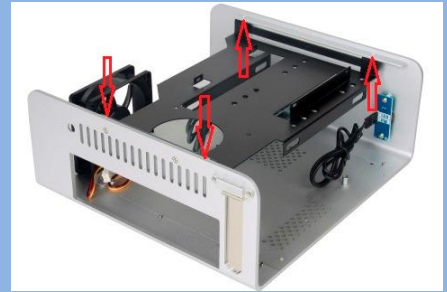

Now you can install drives on the bracket.

First 2.5" HDD on the bottom. (If you install two 2.5" HDs). Next install SSD and ODD on the top.

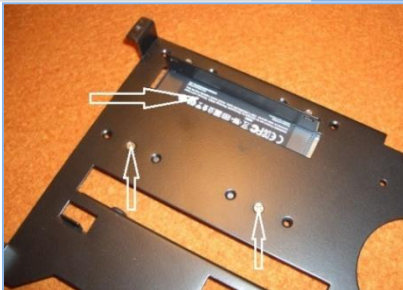

2.5" HD and mounting screws.
If you didn't install 2.5" HD and want to install 3.5" HD, do it now.
Put HD between rubber dampers and use HD screws. Do not over tight.

All drivers on the bracket.

Put bracket with drivers aside and prepare motherboard.

**PERFECT
HOMETHEATER**

Motherboard installation

Install CPU and memory on motherboard, connect PSU and test your motherboard. Set BIOS, check temperatures. If everything is OK, install backplate and motherboard inside of the chassis.

Connect PSU and cables, install bracket with drives and test them. When everything is OK, install top cover, tighten bottom and back screws, install back feet (if removed) and enjoy your system.
